Ologbenla Adegunwa

AUTOMATION BUILDER | MAKE, PYTHON & API WORKFLOWS

Lagos, Nigeria | WAT (UTC+1) | gunwax024@gmail.com
adegunwa-automations.netlify.app

PROFILE

Self-taught developer and University of Lagos Building student with hands-on experience building personal automation projects and business workflow demonstrations. Focused on enquiry tracking, spreadsheet integrations, Telegram tools and scheduled publishing. Available for scoped projects and agency implementation work.

TECHNICAL SKILLS

Make | Python | APIs and webhooks | Google Sheets and Gmail | Telegram bots | GitHub Actions | Gemini API | Data mapping, filtering and duplicate handling | Troubleshooting and documentation. Additional project experience: Node.js and web applications.

SELECTED PROJECT EXPERIENCE

Business Request Intake Autopilot - demonstration

- Built Gmail intake, structured extraction and Google Sheets request tracking in Make.
- Added message-ID duplicate checks, missing-information flags and internal email alerts; tested with fictional enquiry data.

Remote Jobs Worldwide - personal publishing project

- Developed Python sourcing and filtering, GitHub Actions scheduling and Sheets-to-Telegram delivery.
- Worked on location eligibility checks, duplicate handling, publishing-status updates and failed-run recovery.

Newsletter and content workflow - personal project

- Integrated AI-assisted drafts and private Telegram review, with structured outputs, quality gates and API-limit fallback behaviour.

Additional Make builds

- Webhook-to-Sheets intake, RSS collection with existing-record checks, and SerpApi search-result collection through an iterator.

EDUCATION

University of Lagos - Building, undergraduate student
300 level | Ongoing

Project experience reflects personal builds and demonstrations; no paid client results are claimed.
